

## **Moon Exploration, the Gateway to the Stars**

Giuseppe Reibaldi - Maurizio Fagnoli

Moon Village Association

The future of Moon Exploration can be identified with the implementation of the Moon Village. Moon Village' is a concept that seeks to transform the paradigm shift referred to unprecedented international cooperation in space exploration and the new approaches of Moon exploration and exploitation into a set of concrete actions and create an environment where both international cooperation and the commercialization of space can thrive in a sustainable manner. Moon Village brings together efforts from the private sector, governments, academics and others to explore and use the Moon in a sustainable manner. Realizing the Moon Village will be a major step forward for the peaceful development of humankind.

Papers are solicited on the technical, programmatic, legal and educational aspects of the Moon Village with all its implications
